

ENVIRONMENTAL POLICY STATEMENT

Gildemeister LSG Solar Australia is committed to a clean, healthy and ecologically sustainable environment. As such, Gildemeister LSG Solar Australia recognises its responsibility to conduct all of its operations in a way which will minimise and reduce the impact on the environment and its natural resources. We bear responsibility not only for the environment but also for our employees and strive to make careful use of resources.

The need to conserve natural resources and protect the environment is an important issue at Gildemeister LSG Solar Australia. We consider sustainable environmental protection to include not only technological innovations and the environmentally conscious design in the field of green energy technology of utility-scale solar power plants but also to carry out environmental friendly construction practices.

Each of our employees is required to use natural resources economically and appropriately and to ensure that his or her activities have the least possible impact on the environment. We also expect sustainable business practices and a transparent supply chain of our suppliers and business partners.

This environmental obligation is the responsibility of managers, supervisors and employees at every level of the company and will be achieved through the following key objectives:

- Comply with and exceed the requirements of all applicable laws, regulations and standards.
- Ensure management are actively involved and provide demonstrated leadership to support continuous improvement in environmental performance.
- Communicate and consult with all employees (and others), to increase their awareness of their environmental obligations and responsibilities.
- Strive to continuously improve our environmental management systems and practices through a process of auditing, review and revision.
- Investigate and ensure a prompt response to all work-related environmental incidents and develop corrective action to prevent recurrence.
- Seek to prevent pollution before it is produced, reduce the amount of waste thus reducing landfill at our operation and support pollution prevention by our customers and suppliers.
- Adopt best available practices for the reduction of emissions to air, water and land, and for the conservation of water and energy.
- Periodically review and revise our Environmental Policy and procedures to maintain their relevance.

We will respond to the environmental challenges in all areas of our business and communicate that it is the responsibility of every employee to implement this policy.
